Forecast for Wednesday 26 May 2021

Weather: Early mist and fog patches rising up from valleys to briefly cover summits then dissipating. Showers will move southwards through the region during the morning and by midday it will begin to dry out and cloud will break up to leave a largely sunny afternoon across the whole region. Overnight some patches of fog and mist will form again in valleys, elsewhere though it will remain dry and clear.

Chance of cloud free mountain/hill tops above 600m: 60% becoming 100% by mid-morning

Visibility: Good but deteriorating in and around any showers and as cloud bases of around 300-400m briefly cover hill tops first thing. Improving by mid-morning to be very good through the whole day as cloud bases lift above summits. Becoming poor after dusk in valleys in any fog.

Meteorologist's View

Once the morning gets underway and cloud breaks up it will be a sunny day on the hills with high UV. The north-westerly breeze will bring a chill to the air on hill tops though.

Recent rainfall: measured at Neuadd: altitude 353m
